

Basic Principles in Flow Cytometry

By Vasiliki E. Kalodimou

Table of Contents

Forewordxi
About the Authorxiii
1. Overview of Flow Cytometry	1
Principles of Flow Cytometry	2
Parts of the Flow Cytometer	2
Flow Cytometer Operation	4
Cell Sorting by Flow Cytometry	4
References	6
2. Fluorescence and Fluorescent Dyes	7
Functions of Fluorochromes	7
Compounds Used to Label Proteins Covalently	8
Quantum Dots	9
Probes for Nucleic Acids	10
Fluorescent Proteins	11
References	12
3. Immunofluorescence and Fluorescence Compensation	13
Choosing the Right Fluorochrome	13
Fluorochrome Production	14
Sample Preparation	14
Direct Cell Labeling	15
Indirect Cell Labeling	15
Selecting the Proper Concentration of an Antibody	16
Fluorescence Compensation	17
Antigen Quantification	20
References	22

4.	DNA Analysis	23
	Cell Staining for DNA	24
	Ploidy	25
	Quality of the DNA Histogram	26
	Excluding Clumps from the Analysis	28
	Analysis of Cell Cycle Phases	30
	Multiparameter Measurements	31
	References	35
5.	Data Analysis	37
	Gating Strategy and Computational Analysis	37
	Fluorescence-Based Cell Sorting	40
	Choice of Fluorochromes	41
	Parameters and Statistical Analysis	41
	Intensity and Spread of a Distribution	42
	Number of Cells in a Subpopulation	42
	Single- and Dual-Platform Methods for Absolute Number Calculations	44
	References	47
6.	Cell Proliferation	49
	Using DNA Histograms to Analyze the Effects of Proliferation ...	49
	The BrdU/Anti-BrdU Method	51
	Method Using BrdU/Hoechst and PI	54
	References	60
7.	Cell Death and Apoptosis	61
	Cell Viability	61
	Apoptosis	62
	The TdT-Mediated dUTP Nick End Labeling (TUNEL) Method ...	67
	References	67
8.	Applications in Clinical Practice and Quality Control	69
	Applications in Clinical Practice	69
	Other Applications in Flow Cytometry	76
	Quality Control	77
	References	78
	Glossary	81
	Suggested Reading	83
	Index	89
